## **WOOD IN EVERYTHING**

Noble wooden floors have delighted with their beauty and are the object of desire for centuries. GOOD WOOD floorboard is made entirely of wood. It is a completely natural, healthy and ecological product, which after long years of use can be subjected to repeated renovation.

### **LAYER DESIGN**

GOOD WOOD floor board is made of two layers of wood connected crosswise which ensures its optimal stability. Compared to a solid board, it is much more resistant to temperature and humidity changes.

### **FLOOR HEATING**

GOOD WOOD floorboard, thanks to its layered construction, perfectly conducts heat and can be successfully used on underfloor heating - both electric and water.

### **WOOD CLASSES**

#### **NATUR**

Wood free from white and cracks on the surface. Healthy knots up to 8mm are acceptable. Black knots up to 3mm are acceptable if they are not present in groups. Wood with natural colors and wood grain. Surface sanded with granulation of 150.

#### **RUSTICAL**

Light surface crack and light core crack acceptable. Knots without restrictions. Other natural defects of wood are permissible. White allowed. Wood with natural colors and wood grain. The surface is smoothed with a dark brown putty and sanded with granulation of 150.
